

Cullen Morris hails from the software industry and has years of project management experience. For the past five years he has worked building a deep pipeline of solar projects in multiple states. As Vice President of Development for Strata Solar in North Carolina, Cullen was responsible for a pipeline of over 150 projects, more than 85 of which have been built to date. This pipeline, totaling approximately 1,200 MW, consisted of projects in every stage of the development process. His team was highly efficient at shepherding projects from origination to shovel-ready status. In his current role as Principal at Cooperative Solar, Cullen has continued to provide high quality solar projects to partners and clients. He has a thorough understanding of the utility scale solar market and what it takes to succeed in the space. Cullen has an engineering degree from Virginia Tech and a Masters in Energy Management from Duke University. He serves on the Board of Directors for the North Carolina Sustainable Energy Association.
